

LinuxDays

opencart.org

The Power of Linux

Purpose of this course

- You now have Linux – what to do with it?
- Many of our former participants installed Linux but didn't switch to it in their daily workflow
- This course shows a few examples of tasks Linux is particularly good at, giving you ideas what to use it for
- The more creative you are, the more applications you will find in your everyday life
- This is not supposed to be a flame-war against Windows or Mac OS, but we will be comparing against them.

...get to love your new system! :-)

BASIC

Stuff that you can already do

Automatic update and shutdown

```
sandro@linux-gttg:~> sudo su  
root's password:  
linux-gttg:/home/sandro # zypper ref && zypper -n up && poweroff
```

- `sudo su`: become root permanently
- `zypper ref`: force check for updates now
- `zypper -n up`: install updates,
 -n: don't ask for confirmation
- `poweroff`: shut down PC
- `A && B` : if A completed successfully, do B
- Unattended → potentially dangerous!

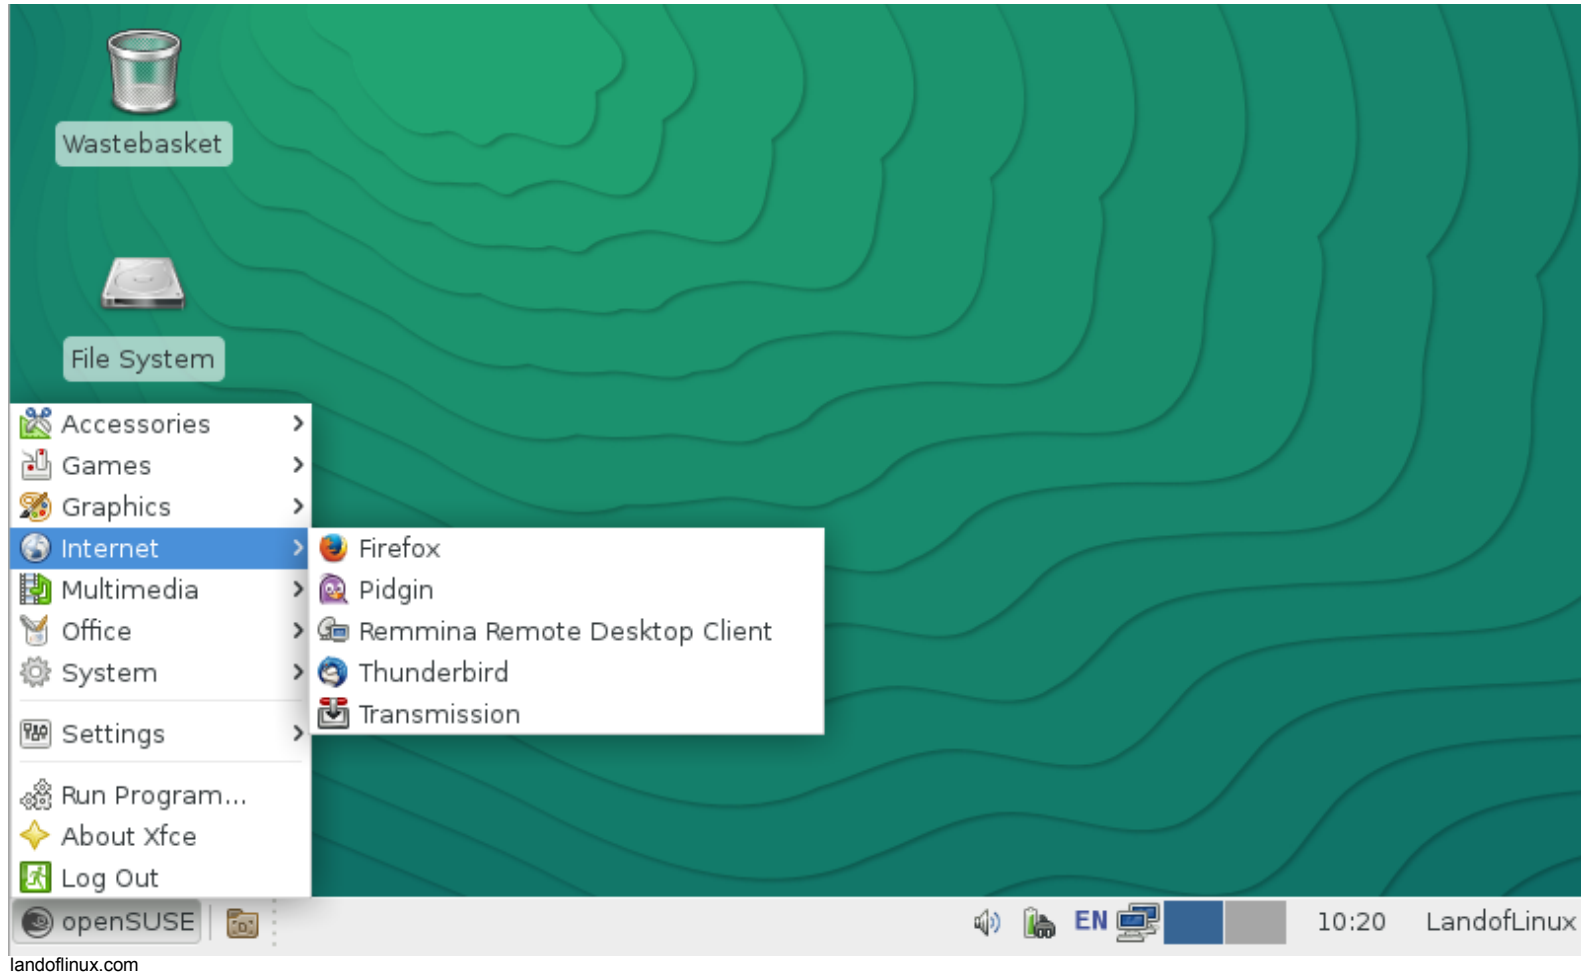

Creating an ad-hoc network

- using Networkmanager (Live Demo!)
- Sharing your network connection:
 - LAN to WLAN
 - WLAN to LAN
- Gaming in the train
- vs. Win: Removed in Windows 8 and higher!

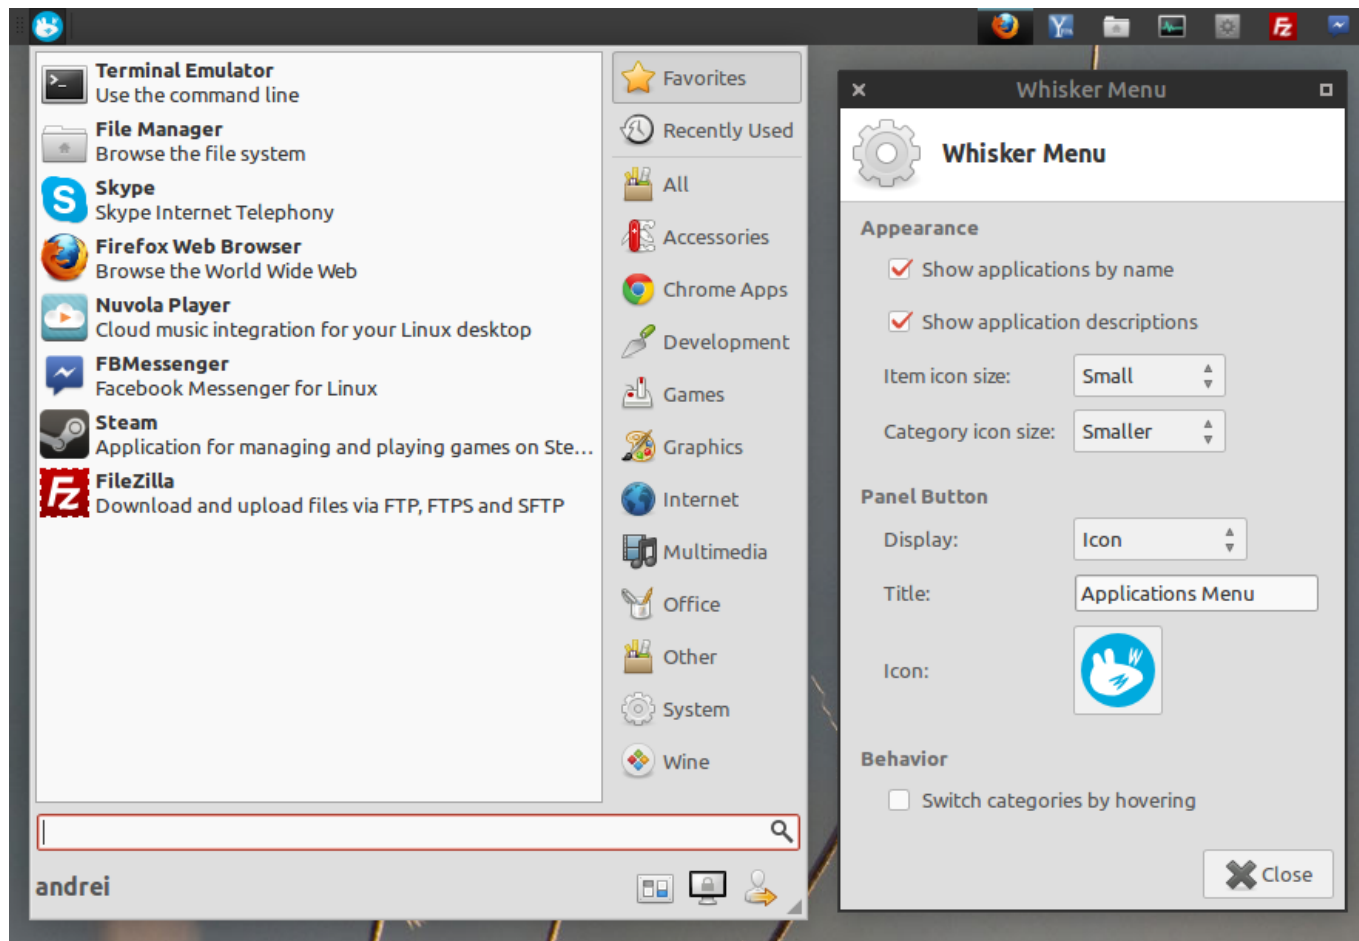

You're free to replace anything you don't like

- e.g. start menus: xfce menus, kupfer, dmenu
- e.g. clipboards: std., glipper, copyq
- e.g. file managers: nemo, spacefm, ranger
- e.g. shells: bash, fish, zsh; – tmux

Start Menus: XFCE default menu

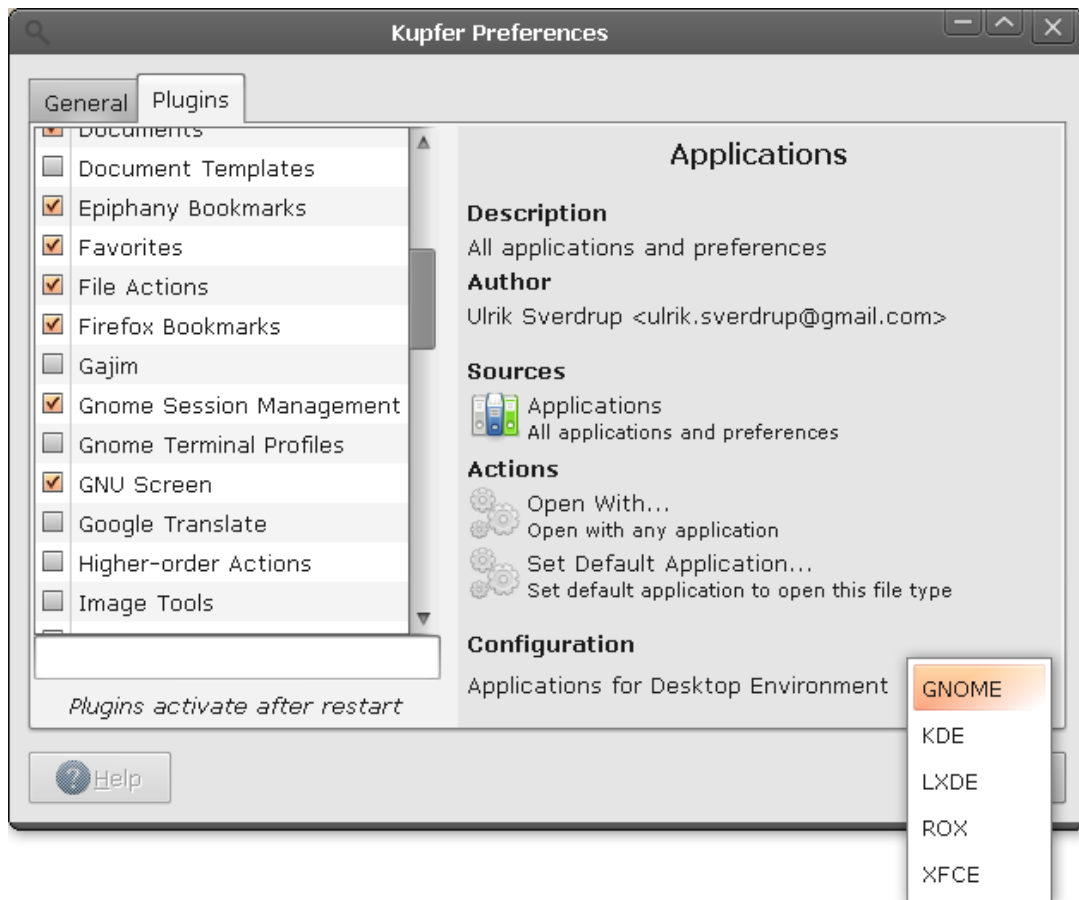

Start Menus: XFCE Whiskermenu

Start Menus: Kupfer

2x webupd8.org

Start Menus: dmenu

- Super compact and lightweight (live demo)

Start Menus: dmenu

- Super compact and lightweight (live demo)
- Yet incredibly powerful

```
Found 41 matches for 'test' on dict.leo.org:

Substantive
test                die Pr
test                der Test
check               der Test
test
test                die Untersuchung
test                die Probe
test                die Aufgabe

Regenerating: 1 file(s) changed at 2015-04-19 19:54:06 ...done in 0.085722297 seconds.
Regenerating: 3 file(s) changed at 2015-04-19 19:55:4
```

Clipboards: the standard clipboards

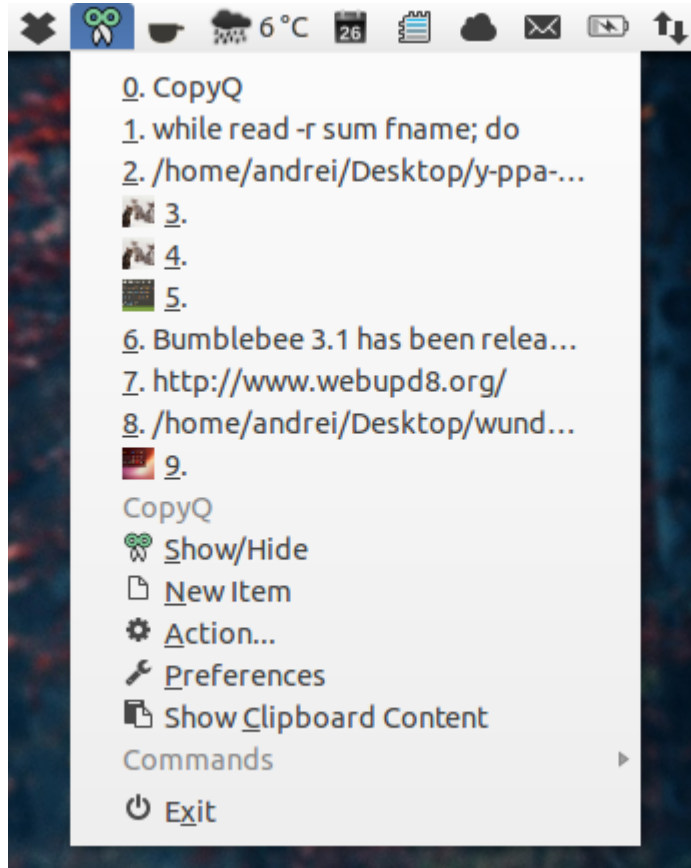

- Most distros come with 2 integrated clipboards:
- Whenever you select a text, it is copied
 - Paste using middle click (live demo)
- Ctrl+C, Ctrl+V
- Clipboards are independent
 - can keep 2 different values

Clipboards: Glipper

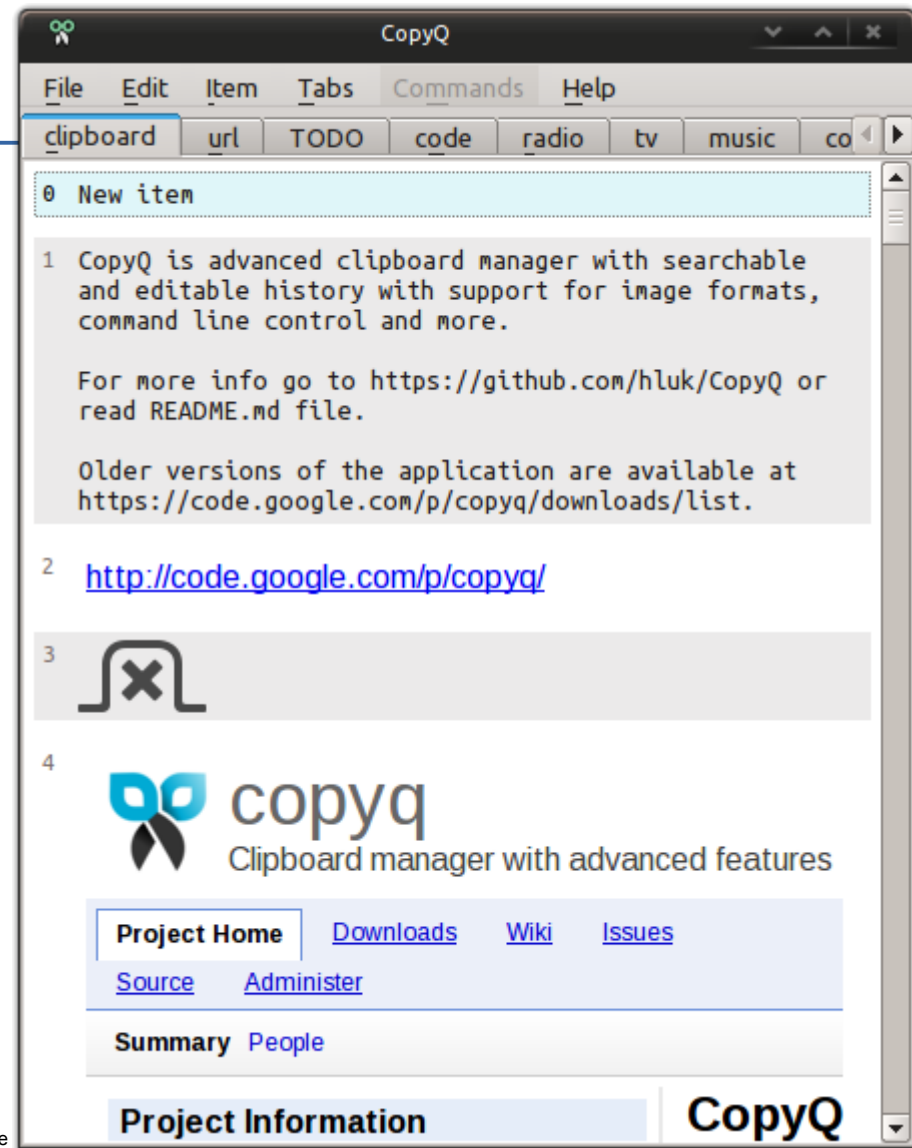

- Stores multiple items

Clipboards: CopyQ

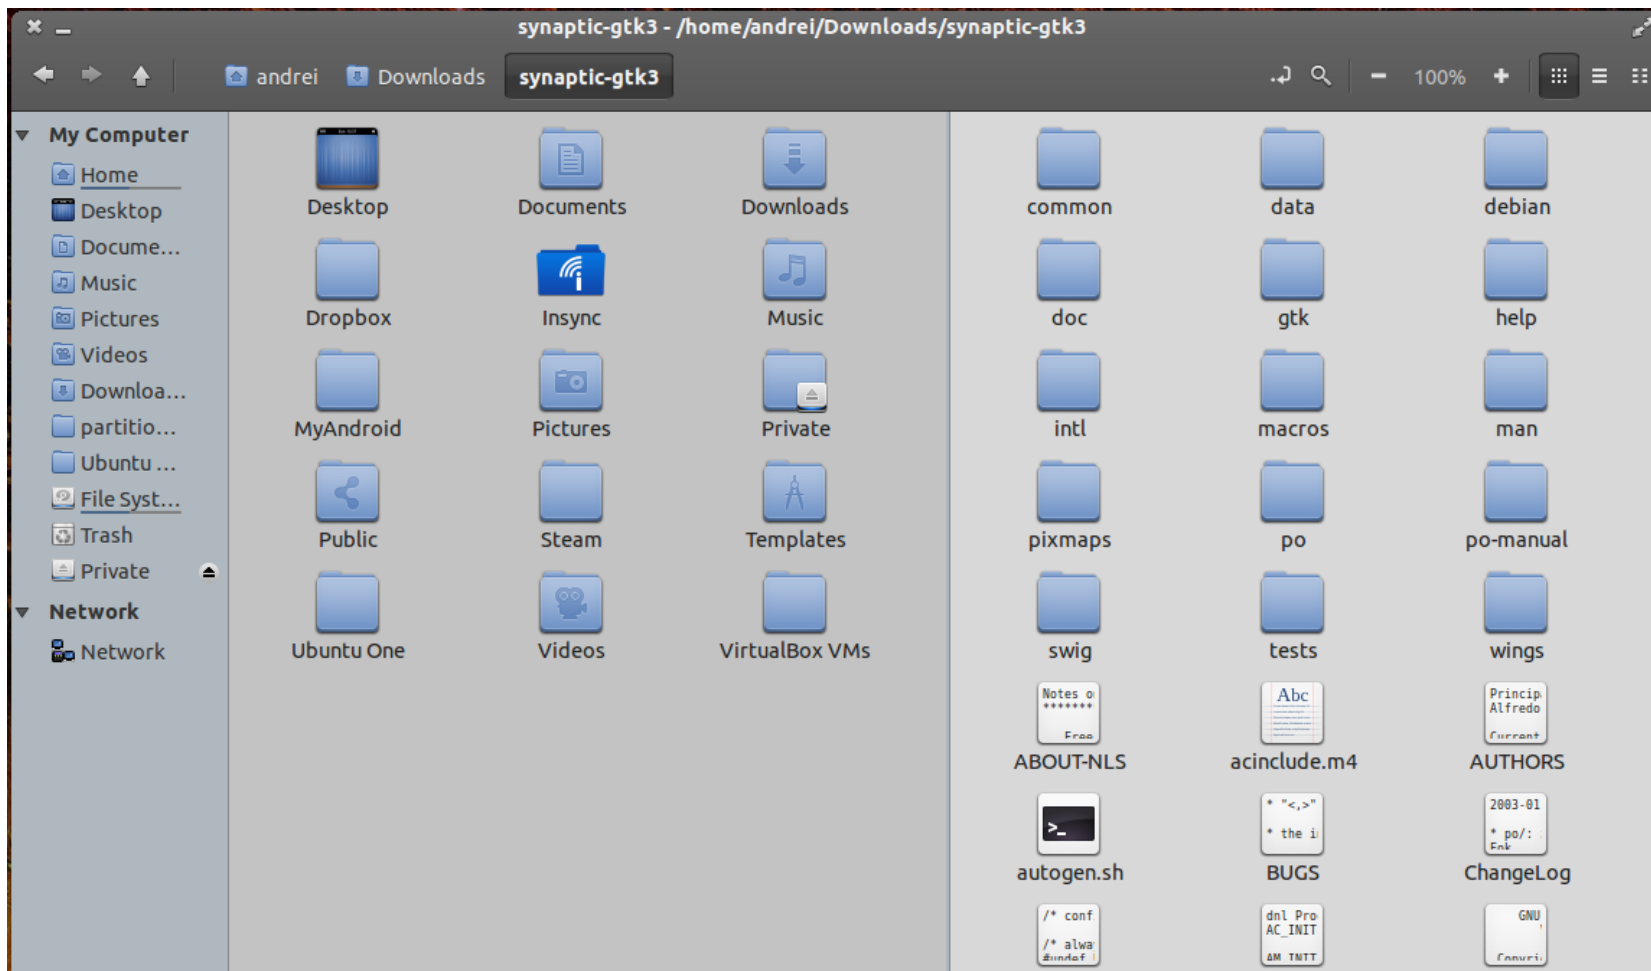

webupd.com

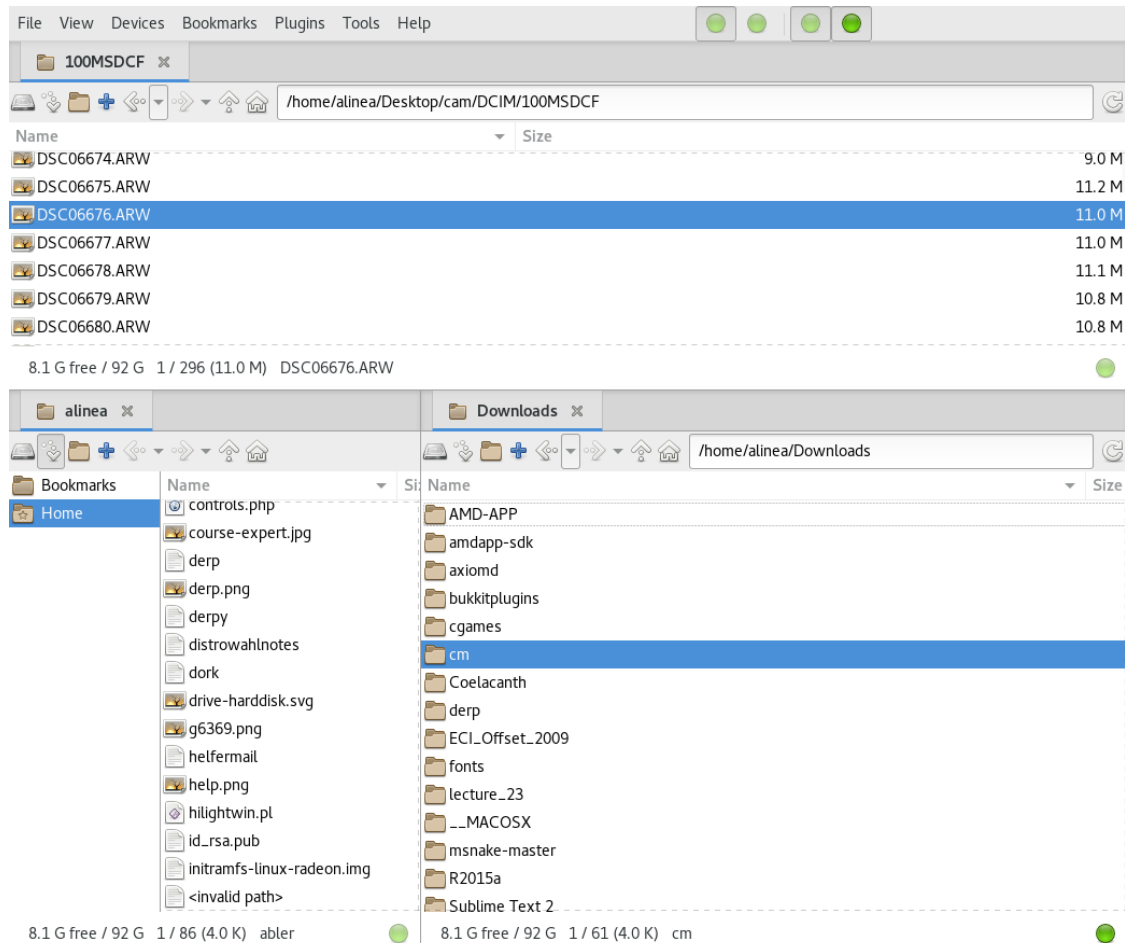

CopyQ website

File Managers: Nemo

File Managers: SpaceFM

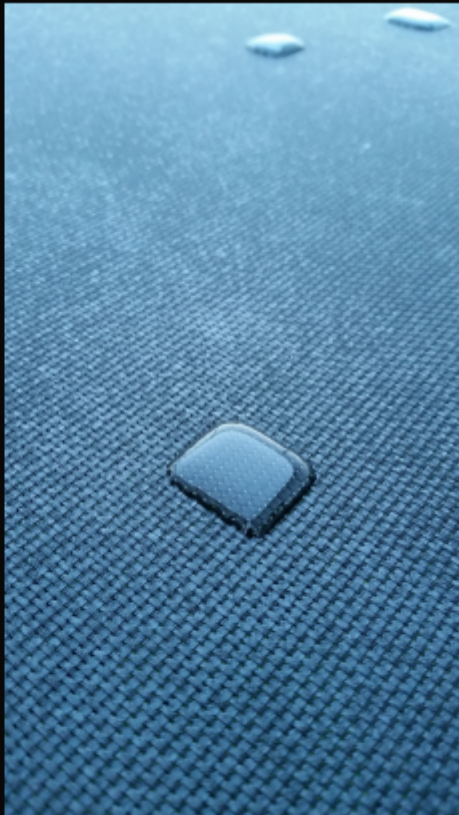

File Managers: Ranger

```

```

172M sum, 7.94G free 8/8 ALL

```

Shells: Bash

- This is the shell you already know
- Use Arrow Keys and Ctrl+R to go through your command history
- You can personalize it using `.bashrc`

```
If I manage my bank account like I manage my phone battery, I'd be rich.

```

Shells: Fish

- The Friendly Interactive Shell, good for lazy people (like me)
- Shows autocompletion while typing
- Type + Arrows to search
- Configure in web browser

byteplumbing.net

```
nate@blackbox ~/lwn> help fish_right_prompt
help: Help is being displayed in xdg-open.
nate@blackbox ~/lwn>
(process:29259): GLib-CRITICAL **: g_slice_set_config: assertion `sy
e == 0' failed

lwn.net

Shells: ZSH

- Z-Shell
- Many themes/extensions/configuration frameworks
- Lots of features
- First start will setup a basic config file

```

~ > sources > packages > master
~ > sources > packages > master tar
A -- append to an archive
c -- create a new archive
f -- specify archive file or device
t -- list archive contents
u -- update archive
v -- verbose output
x -- extract files from an archive
~ > sources > packages > master git commit -m"Import IDs (aka keys) from XML into Proceedings and InProceedings"
bck-i-search: com_

```

Shells: tmux

- tmux is not a shell!
- ...it's a container for shells
- Open multiple shells in the same window
- Remains open when your terminal crashes
 - or if you accidentally close it
 - or if it's remote and your connection breaks
- Simply re-attach to it to get your session back

dotshare.it

Redirect output

- Redirect output using `>` (append with `>>`)
 - `echo "created on $(date)" > massCopy.log`
- Redirect error output using `2>` or `2>>`
 - `cp ~/* /media/target 2>> massCopy.log`
- Pipe data with `|`
 - `ls | wc`
 - `find . | grep 'hello'`

dd

- Bitwise copy: Create exact copies on low level
- Can pipe to commands, e.g. pbzip2

dd

- if=..., of=...: input / output file or device
- bs=4M: set block size to 4 MB (faster copy)
- status=progress: show a progress bar
- Replace ... by a device or file:

```
sudo dd if=/dev/sr0 of=image-of-cd.iso
```

Input file: The CD drive

Output file: a file that will become the iso
- WARNING: target will be overwritten! (dd = “disk destroy”)

dd

- Creating an OpenSUSE boot stick from CD image:

```
sudo dd if=openSUSE-Leap-42.1-DVD-x86_64.iso of=/dev/sdb bs=4M
```

Input file is the CD image

Output file is the entire USB key (no number specified)

Blocksize 4MB for faster copy to USB disk

- pbzip2 is a command that compresses
 - Has multi-core processor support
 - Can copy your disk and compress it in real-time!
 - `sudo dd if=/dev/sda1 | pbzip2 > archive.img.pbzip`
 - Could just as well use `...| zip > archive.img.zip`, but would be slower because no multi-core support

VPN to ETH using openconnect

- Install NetworkManager-openconnect

```
sudo zypper in NetworkManager-openconnect
```

- Live Demo

- new connection → VPN (openconnect)
- VPN → Gateway: sslvpn.ethz.ch
- Leave rest as is

youtube-dl

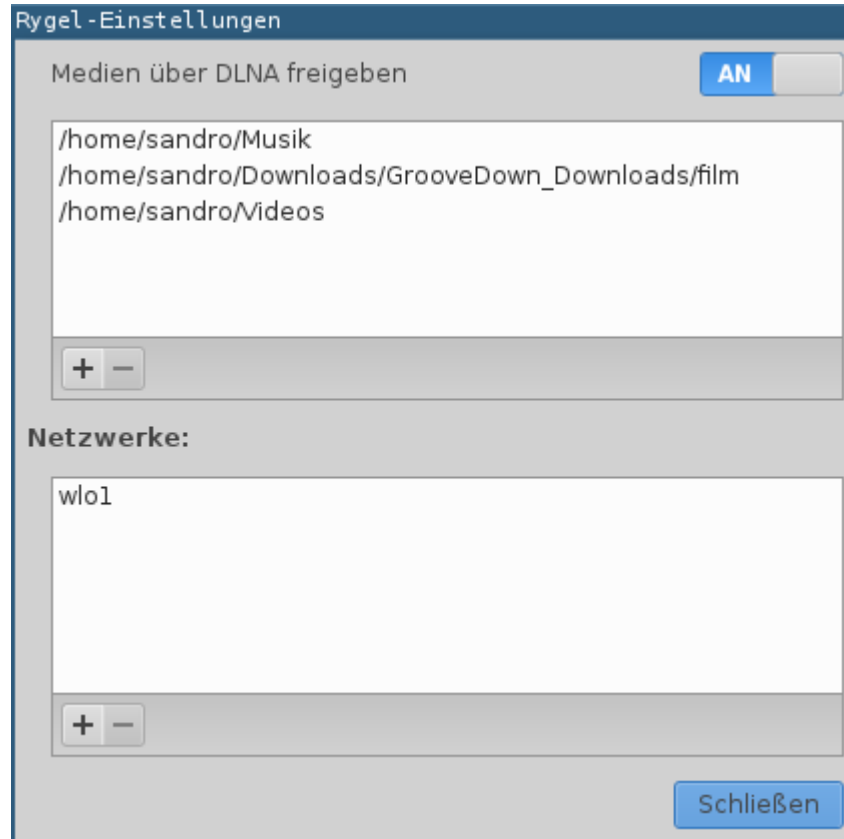

- Download any Youtube-Video
 - Video and / or
 - Audio
- List available formats:
 - `youtube-dl -F '[URL]'`
- Download video:
 - `youtube-dl -f [FORMAT] '[URL]'`
 - `youtube-dl -f 141`
`'https://www.youtube.com/watch?v=e4BTRB1XA-g'`

mpv

- Controlled entirely by keyboard (live demo)
- Super-fast seeking, subtitle toggeling, speed change etc. with one button
- Plays pretty much anything
- Can be run in the console
- Supports playlists
- Support for youtube-dl:
`mpv --ytdl http://y2u.be/YE7Vz1Ltp-4`

Streaming media to your TV

- Rygel
- MiniDLNA
- MediaTomb

Merge or burst PDFs

- Need to merge lots of separate PDFs?
- `pdfunite [SOURCES] [DESTINATION]`
- `pdfunite ex.pdf appendix.pdf combo.pdf`
- `pdfunite course-part*.pdf merged.pdf`

- `pdfseparate [SOURCE] [DESTINATION]`
- `pdfseparate images.pdf image%d.pdf`
 - Creates image1.pdf, image2.pdf, ...

See you power consumption

- **powertop (Live Demo)**
 - See exactly which part of your computer uses how much power
 - Tune parameters
 - Calibrate battery
- **cpupower**
 - See what your CPU is doing
 - Frequencies, idle stats
 - `type cpupower` **or** `man cpupower` **for help**

Recover lost data

- photorec
 - works despite broken file system
 - recovers deleted pictures, videos, documents, ...
 - ~300 file families supported
 - live demo(?)
- dd_rescue
 - like dd, but continues despite damaged blocks
 - unreadable blocks are replaced by 0
 - use to pull all the data you can from an almost dead HDD

xrandr

- Control all your displays with a single command
- `xrandr --output [OUT] [CONFIG]`
 - If no options are given, xrandr shows current config and displays
- Put projector to recommended resolution:
 - `xrandr --output VGA-0 --auto`
 - `xrandr --output VGA-0 --auto --left-of LVDS`
 - `xrandr --output VGA-0 --same-as LVDS`
 - `xrandr --output LVDS --rotate left`
- Hint, hint: Make a script, use keyboard shortcuts :-)

Super-cool scripting

- e.g. putting your PC into movie watching mode

```
#!/bin/bash

# Turn off both PC screens
xrandr --output VGA-1 --off
xrandr --output LVDS-1 --off

# Turn off DPMS, which blanks the screen after 5 minutes of inactivity
xset s off -dpms

# set my TV as main output
xrandr --output HDMI-0 --mode 1600x900 --left-of LVDS-1

# remotely turn on my TV via the HDMI connection
echo 'on 0' | sudo cec-client -s /dev/ttyACM0

# Set a random wallpaper on the TV
feh --randomize --bg-fill /home/alinea/Files/wallpaper/*
```

Super-cool scripting

- e.g. batch convert images with imagemagick
- This script finds all the pictures my TV doesn't support...
- ...and automatically converts them into a readable format
- Thousands of pictures processed in just a few minutes

```
find . -type f -print0 | \ # Find any files in the current directory
while read -d ' ' f; do    # and apply for each:
    # If the file is a jpg picture...
    file -b --mime-type "$f" | egrep -q '^image/jpeg$' \
    # ...and if the format is the wrong one...
    && identify -format '%[jpeg:sampling-factor]' "$f" \
    | egrep -q '^1x1,1x1,1x1$' \
    # ...convert it into the right format :-)
    && { mogrify -sampling-factor 2x1 "$f"; echo "$f"; }
done
```

Keyboard shortcuts!

- Custom screen capture
 - using `import` from the ImageMagik package
- Mastering all your music
 - e.g. Clementine (live demo!), mpd
- Absolute brightness / volume control
 - `light`
 - `pamixer`

ADVANCED

Stuff that you can easily learn by reading

Process management

- top, htop, ps
- Ctrl+Z: Pause running process
 - fg: Run it in foreground
 - bg: Run it in background
 - Can use fg after the use of bg
- kill, killall
 - -9, -KILL

Remote machine control

- **ssh: get an encrypted shell on a server**
 - `ssh [USERNAME]@ [MACHINE]`
 - `ssh sandroka@optimus.ethz.ch` (D-INFK only)
- **scp: transfer a file via SSH (encrypted)**
 - Works like `cp`
 - `scp myFile.pdf sandro@192.168.1.123:/media/ETH/`
- **rsync: advanced file copy**
 - `rsync -avh Downloads/ me@miau.ch:/some/folder/`

Master your NAS

- Ex.: using a Raspberry Pi with Arch Linux ARM
 - samba for sharing files with Windows PCs
 - MiniDLNA for DLNA sharing (to TV and HiFi)
 - Syncthing for auto-synchro with PC and my Pi in Zürich
 - Kodi for HDMI media Center with CEC
 - MPD for Remote-Controlled music playback
 - SSH:

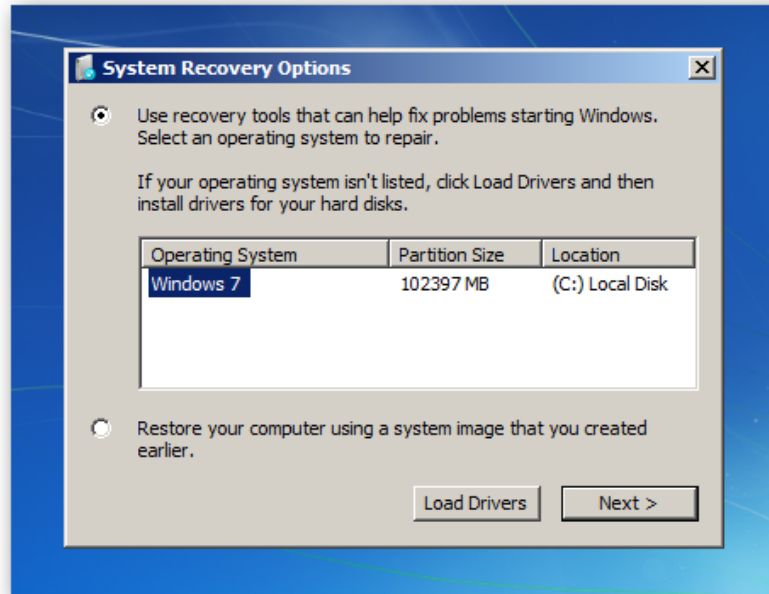

Finding your logs

- syslogs:
 - `/var/log/syslog`, `dmesg`, `journalctl`
- logs of systemd services
 - e.g. Mediatomb: `/var/log/mediatomb`
- Live demo: Checking on my router at home

chroot

- repairing a broken GRUB
- vs. magic Windows / Mac Boot fix

chroot

- “starting” a broken system without booting it
- Boot USB, Live mode (OpenSUSE: “Rescue System”)
- Login as root
- `mount /dev/mapper/system-root (or /dev/sda1 etc.) into /mnt`
- `mount -o bind /proc /mnt/proc`
- `mount -o bind /sys /mnt/sys`
- `mount -o bind /dev /mnt/dev`
- `chroot /mnt`
- You now have a root shell on your usual system

cronjobs

- Periodic jobs
- Handled by the crontab table
- Schedule for weekday / time / ...
- Schedule for reboot

- `crontab -e`

Easy development

- Tight system integration
 - gcc, gdb – live demo of gcc
 - java, ghc, python, ruby etc.
- PM brings in all you need
 - e.g. Library “eigen3”
 - powerful editors, e.g. qtcreator, atom, vim, eclipse, codeblocks
- vs. MinGW etc.

Encrypt

- LUKS: encrypt an entire partition
 - First erase whole disk (e.g. `dd if=/dev/zero...`)
 - `cryptsetup luksFormat /dev/sd...`
 - `cryptsetup luksOpen /dev/sd...`
- encfs: create an encrypted folder
 - No need to be root
 - `encfs ~/.../targetDir ~/.../decryptedDirMount`
 - `fusermount -u ~/.../decryptedDirMount`
 - Live demo!

What have we seen?

- In just 3 courses, you have learned the basics of a system that is so universal that it can run on your computer, your NAS, your router and many more
- This means you now have the skills to rule all these devices! But careful: You are not yet experienced... security!
- You're now ready to read yourself as smart as you want to be, we will assist you if you run into any trouble
- Anything can be automatized, your time and motivation are the only limits

Helpful resources

Coming up

- Bash workshop (“sold” out)
 - 21.10.16 | 17:15-19:00 | ETH HG E 41
 - 24.10.16 | 17:15-19:00 | ETH HG E 22
- “The Developer's Toolkit or Things I Wish I'd Known Earlier”
 - 25.10.16 | 17:15-19:00 | ETH HG D 5.2
 - This semester's spotlight course
- Stammtische: Community meetings in a casual setting (i.e. beer!)

Like this stuff? Become part of our community

- Stammtische every 2 weeks
 - talk about your ideas, get inspired
- A great team
 - we make the LinuxDays happen twice a year
 - over 200 people involved
 - great networking opportunity
 - we have many friends in the ETH / UZH staff
- Help at our install events
 - every year, we set up Linux on over 300 machines
 - many challenges, brand new machines and rare hardware
 - acquire practical skills
